Document 2: JP, 10-278047, A (Murata MFG. Co., Ltd.), October 20, 1998 (10.20.98), Claim 1, Figs. 3 and 4 (Family: none)

[Explanations]

Regarding claims 1-13

Document 1 describes installing a core using a clamp 7 provided on outer frames 3 and 4 that are fitted together at the time of clamping. In the invention described in document 1, because the outer frames are fitted together at the time of clamping, they are interpreted as also serving as mold clamping force receiving parts; however, they differ from the invention relating to claim 1 of the present application in a positioning/installing method of a core corresponding to cavity forming blocks.

Document 2 describes positioning a mold using a stopper protrudingly provided on a base plate.

Document 3 describes a fixing method of a mold without using outer frames, and describes that it can be used even when a mold has a different size. Thus, using the method even when a mold has a different size is a theme that had been considered prior to filing the present application; therefore, adopting positioning and fixing of a mold without using outer frames would be easily conceived of by a party skilled in the art.

However, using outer frames as mold clamping force receiving parts separately from positioning and fixing, adopting engaging projections for positioning in addition to this technical matter, and applying them to a mold for in-mold decorating simultaneously with molding could not be easily conceived of by a party skilled in the art.
